

Devang Borkar

Davis, CA | +1 (312) 358-5722 | devangborkar3@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Skills

- **Languages:** Python, Go, C#, TypeScript/JavaScript, SQL
- **Backend & Data:** FastAPI, Flask, REST APIs, PostgreSQL/pgvector, MongoDB, Redis, React
- **AI Systems:** LLM evaluation, agent workflows, tool calling, RAG/vector search, prompt optimization, PyTorch, Hugging Face, LoRA
- **Cloud & Infrastructure:** Docker, AWS, GCP, CI/CD, OpenTelemetry/OpenInference, OpenRouter

Education

University of California, Davis

Master of Science in Computer Science (coursework completed)

Sept 2024 - Sept 2026 (expected)

GPA: 3.91/4.0

Relevant Coursework: *Distributed Databases, Machine Learning, Data Structures and Algorithms, Vision Language Models*

Pune University, India

Bachelor of Engineering in Computer Engineering | Honors Track in AI/ML

Aug 2019 - June 2023

GPA: 4.0/4.0

Experience

Software Engineer

PilotCrew AI

Oct 2025 – Present

Davis, CA

- Built LLM-agent evaluation infrastructure with Python APIs, MongoDB run tracking, Dockerized execution, and observability across coding, RAG, tool-use, and conversational workflows.
- Engineered agent runners, client-side tool traces, prompt/version tracking, deterministic graders, regression gates, and failure analysis for repeatable model and prompt comparisons.
- Built trace-driven prompt-optimization loops that turn evaluation failures into instruction updates and measurable regression checks.

Software Engineer Intern

LearnHaus AI

Jun – Aug 2025

Sacramento, CA

- Built and deployed a full-stack multimodal coaching application in React and Python that orchestrated video, audio, transcript, and multi-provider model analysis through asynchronous workflows.
- Developed an LLM-as-Judge workflow for cross-provider response evaluation and deployed the services on GCP Cloud Run.

Software Engineer

Hexaview Technologies

Aug 2022 – Sept 2024

Pune, India

- Shipped 30 production features for a Fortune 500 wealth-management platform, building C#/.NET and SQL services in a 30+ person cross-functional Agile team.
- Optimized a legacy backend serving 1M+ monthly requests and redesigned 50+ REST APIs to simplify contracts, service boundaries, and maintenance.

Projects

Process Reward Model for Compute-Constrained Reasoning

[GitHub](#) | Graduate Research

- Fine-tuned Qwen3-8B with LoRA on 563,181 labeled PRM800K steps, achieving 94.54% step-verification accuracy.
- At N=5, PRM-guided selection achieved 60.0% GSM8K accuracy vs. 50.8% self-consistency and matched N=64 self-consistency with 12.8x fewer generations.

ResShare: Decentralized File Sharing Platform

[GitHub](#) | Apache Foundation - ResilientDB

- Built a full-stack file-sharing platform using Flask and React, implementing REST APIs for user authentication, access control, file upload/download, folder hierarchy management and sharing workflows.
- Added a document indexing and RAG pipeline for files using text extraction, semantic chunking, embeddings, FAISS search, source-attributed responses, and per-user retrieval isolation.

CausalFlow: Causal Attribution and Repair for LLM Agents

[GitHub](#) | NeurIPS 2026 submission (under review)

- Built an interventional framework that converts agent traces into dependency DAGs, localizes failure-inducing steps through downstream re-execution or outcome prediction, and generates minimal repair pairs.
- Across four primary runs with 2,835 unique persisted trials, benchmark-specific evaluators marked 467 of 1,088 baseline failures repaired (42.9%), raising aggregate success from 61.6% to 78.1% (+16.5 points).
